The new book by the author of *The Grog Log*, *Intoxica* and *Taboo Table*. Beach Bum Berry, as he is better known, is America's leading authority on tropical drinks and polynesian pop culture. In this all new book, Berry not only offers up tantalizing new drink recipes, but tells stories

about some of the most famous figures of their time. The Bum applies the same dogged research to the untold stories of the people behind the drinks. Stories culled from over 100 interviews with those who actually created the mid-century Tiki scene -- people as colorful as the drinks they invented, or served, or simply drank. People like: Leon Lontoc, the Don The Beachcomber's waiter who served Frank Sinatra and Marlon Brando by night, and acted in their movies by day; Henry

Riddle, the Malibu Seacomber bartender who fed items about his famous customers to infamous gossip columnist Louella Parsons, till the day Howard Hughes found him out; and Duke Kamanamoku, whose manager turned him from Olympic champion into reluctant restaurateur.

The New Beachcomber's Guide to the Pacific Northwest Rowman & Littlefield

Sea Stacks and Sandstone is a celebration of Britain's coastal geology - ammonites and sand, sea stacks and wavecut platforms. It goes paddling in the rock pools to examine the rock samples so perfectly polished up for us by the sea. Between the lichen and the low-tide line, everything is out in the open to be looked at:

desert sand dunes emerging out of the ocean; cliffs bent and crumpled by two continents crashing into each other; a band of red-hot basalt squeezed from somewhere in Scotland. Britain today lacks glaciers and volcanoes, but the grand geological earth-shifter we do see is the sea, hard at it around our 6000 miles of coast. And as you wander along the edge of the sand, gradually slowing your eye to the beach-holiday speed of looking at things, you see small creatures,

seashells and corals from hundreds of millions of years ago. Real geology isn't looking up the books and memorising long words. Real geology is looking at real rock, and working out what has been happening to it. What Britain is and where it came from, just what's been going on for the last 500 million years: all is revealed, in a continuous slice around our seaside.
