The Summer Before First Grade Independently Published

Finally, here comes the summer after a long first grade schooling. Summer is exciting. Active kids will chase around on the playground or practice on the ballfield or dig sand on the beach; curiosity-driven kids will watch television or play video games or stare at laptop screen; or most likely your kids may be both active in nature and curiosity driven. As thoughtful parents, in addition to planning activities and vacations, will get their kids some books, graphic novels or children's readings, buying from Amazon.com or borrowing from libraries. If you do, don't forget this one, the First Grade Summer Book that refreshes what kids have learned in the first school year, lets them grasp a little more about coming school year, and gets ahead of the curve. Besides, it will give your kid something to talk about at the beginning of the next semester with their classmates and friends. Let's see a scenario. On the very first school day, Miss Teacher will say, "Welcome back everyone. Let's get started by telling everybody in the class what you have done during the summer." Amanda raises a hand, "Our family went to the beach. And I got a First Grade Summer Book. I can write nicely now." Nigel raises hand then, "I played lots of baseballs. And I also got a First Grade Summer Book and I know how to do words math now." Theo raises one hand after Nigel, "I had the First Grade Summer Book too and I know how to answer the reading questions now...". The purpose of this book is to give kids some additional meaningful learning to do. You may not be available for them one hundred percent of the time. Give them this book and they have some fun with it instead of mooching around while waiting for you to come back. This book is relaxing and fun to work with. By the end of the summer, kids will have enjoyed fun, learned something new and refreshed for the next challenging school year.

This project is intended to supply parents with a guide containing lessons that can be used for summer learning to prevent summer learning loss. Students experience learning losses in literacy and math skills during the summer break with math decreasing at a faster rate than literacy (National Association of State Boards of Education, 2011). According to NASBE, when students return in fall, they are typically performing on average approximately one month behind where they left off at the end of the previous year. The lessons in this guide incorporate the Common Core Standards for English Language Arts and math and the California Content Standards in social studies, music, and dance to produce content that is both engaging and useful in reducing the learning gap between spring and fall. Parental involvement at the kindergarten through second grade level is critical in developing academic readiness. This project serves as a means to involve parents in their child's education in a way that is enjoyable and feasible, as lessons are designed to go along with summer family outings. The guide contains lessons that prepare students who have completed kindergarten, first, or second grade for their upcoming school year.

The exercises are arranged in a continuous spiral so that concepts are repeated, and a final review allows children to practice the skills in random orders to better highlight their ability to retain the information and skills, and areas that require further practice. Mastering the basic math facts develops automaticity in kids. Automaticity is the ability to do things without occupying the mind with the low level details that are required; this is usually the result of consistent learning, repetition, and practice. Starting your child on a repeating math practice schedule will help prepare them for the second grade, and stand out from the rest of their class in first grade. Our education materials, like these math workbooks for grade 1, will help your students succeed. Starting your first grader practicing the concepts laid out in this first grade math workbook will give them a leg up on their classmates. Studies have shown that math preparation outside of school can be a dominant predictor of their achievement in mathematics. The differences in children's mathematics skill levels is largely related to the input the children receive at home, according to the University of Chicago.
