With the aid of her favorite tea party tablecloth as a makeshift balloon, Miss Petitfour and her charges fly over her village, having many little adventures along the way. Books this ingenious don't come along very often." —Michael Connelly It's the murder trial of the century. And Joshua Kane has killed to get the best seat in the house - and to be sure the wrong man goes down for the crime. Because this time, the killer isn't on trial. He's on the jury. But there's someone on his tail. Former-conman-turned-criminal-defense-attorney Eddie Flynn doesn't believe that his movie-star client killed two people. He suspects

 This future history of the next thirty years, imagined by bestselling author Thomas Harding, is a compelling and startling call to action. In 2020, a researcher is shocked to find a set of notebooks detailing the history of the next thirty years. Is this a hoax? Or could it be real? The notebooks, written in the year 2050, contain interview transcripts between teenage Billy and Gran Nancy. We learn about the great climate SHOCK, when global temperatures rise much faster than anticipated, resulting in catastrophic consequences for humanity. We learn about a shift away from democracy, toward unelected "ethnarchs" — heads of corporations who use their access to our personal data to competently run the world. We learn about the giant city towers where most people live, work and play inside — where it's safe

from natural disasters and viral outbreaks. And between these interviews, we learn more about Billy, whose interest in the history that has been erased from the official record is causing trouble in 2050. Is it too late to change the past to save the future? Key Text Feature glossary

"Imagine The Leftovers, but with honey" (Elle), and in the spirit of Station Eleven and Never Let Me Go, this "spectacular and deeply moving" (Lisa See, New York Times bestselling author) novel follows three generations of beekeepers from the past, present, and future, weaving a spellbinding story of their relationship to the bees—and to their children and one another—against the backdrop of an urgent, global crisis. England, 1852. William is a biologist and seed merchant, who sets out to build a new type of beehive—one that will give both him and his children honor and fame. United States, 2007. George is a beekeeper fighting an uphill battle against modern farming, but hopes that his son can be their salvation. China, 2098. Tao hand paints pollen onto the fruit trees now that the bees have long since disappeared. When

Tao's young son is taken away by the authorities after a tragic accident, she sets out on a grueling journey to find out what happened to him. Haunting, illuminating, and deftly written, *The History of Bees* joins "the past, the present, and a terrifying future in a riveting story as complex as a honeycomb" (New York Times bestselling author Bryn Greenwood) that is just as much about the powerful bond between children and parents as it is about our very relationship to nature and humanity.

The Adventures of Miss Petitfour National Geographic Books

'Vivid, thrilling, a delight ... Tim Flannery is a palaeontologist and ecologist of global standing, and this is a compelling and authoritative narrative of the evolution of Europe's flora and fauna, from the formation of the continent to its near future ... an exciting book, full of wonder' James McConnachie, Sunday Times A place of exceptional diversity, rapid change, and high energy, Europe has literally been at the crossroads of the world ever since the interaction of Asia, North America and Africa formed the tropical island archipelago that would become the continent of today. In this unprecedented evolutionary history, Tim Flannery shows how for the past 100 million years Europe has absorbed wave after wave of immigrant species; taking them in, transforming them, and sometimes hybridising them. Flannery reveals how, in addition to playing a vital role in the evolution of our own species, Europe was once the site of the formation of the first coral reefs, the home of some of the world's largest elephants, and now has more wolves than North America. This groundbreaking book charts the history of the land itself and the forces shaping life on it - including modern humans - to create a portrait of a continent that continues to exert a huge influence on

the world today.
