*Abstracts* Springer

Our planet is growing hotter, which is mainly due to the burning of fossil fuels. Yet, most of us remain chained to the belief that there is no alternative source of energy sufficiently plentiful and cheap. Dawn of the Solar Age provides a blueprint for shifting the energy base of human civilisation out of fossil fuels and successfully reducing the concentration of greenhouse gases in the atmosphere. The author shows how the commercialisation of fully proven technologies—that can provide limitless amounts of renewable energy and entirely replace all fossil fuels—is being delayed to serve the purposes of dominant corporations and nations. He studies the economic viability of these technologies and tells us how we can avert the imminent disaster that we face today. He concludes that the transition out of fossil fuels, though difficult, need not be too slow to prevent irreparable damage.

### Urban Water Reuse

Handbook Gyan

Publishing House

Water is an essential and basic human need for urban, industrial and agricultural use. While an abundance of fresh water resources is available, its uneven distribution around the globe creates challenges for sustainable use of this resource.

Water conservation refers to an efficient and optimal use as well as protection of valuable water resources and this book focuses on some commonly used tools and techniques such as rainwater harvesting, water reuse and recycling, cooling water recycling, irrigation techniques such as drip irrigation, agricultural management practices, groundwater management, and water conservation incentives.

Encyclopaedia of Petroleum Science and Engineering Booth-Clibborn

Includes articles on international business opportunities.

*Advances in Conservation Research and Application: 2011 Edition* is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive

information about Ecology Environment and

Conservation. The editors

have built *Advances in*

*Conservation Research*

and *Application: 2011*

Edition on the vast

information databases of

ScholarlyNews.™ You can

expect the information

about Ecology

Environment and

Conservation in this

eBook to be deeper than

what you can access

anywhere else, as well as

consistently reliable,

authoritative, informed,

and relevant. The content

of *Advances in*

*Conservation Research*

and *Application: 2011*

Edition has been

produced by the world's

leading scientists,

engineers, analysts,

research institutions, and

companies. All of the

content is from peer-

reviewed sources, and all

of it is written, assembled,

and edited by the editors

at ScholarlyEditions™ and

available exclusively from

us. You now have a

source you can cite with

authority, confidence, and

credibility. More

information is available at

Official Record (Hansard)

Sura Books

This book reviews the

current state of the art in

managing infrastructure, urban regions, industrial regions and inhabited areas with respect to flooding and water damage. The author is a well-known expert in storm water management, and this book gives a broad overview of the different manageable components that play a role in storm water risks. It includes chapters on planning infrastructure and regional development, modifications in urban regions and localities with buildings and historical buildings, covering different city types and residential areas, housing and commercial zones, as well as housing development. The author then goes on to review different hydrological conditions that make areas safer, or more prone to storm water threats, and capture and store storm water. The last part of the book covers sealed infrastructure and their role in storm water hazards, including roads, public spaces, roofs, and others.

Sustainable Water Management in Buildings

John Wiley & Sons

In the new millennium, will the architecture & design of today's filling

stations become as talked about as those landmarks of other ages -- the great power stations, the deco cinemas from the golden age of film or the warehouses of our glorious manufacturing past?

*Feasibility Study* Bentham Science Publishers

This study considers the feasibility of options for a new system of charging for road use in the UK, in order to make better use of road capacity and to help reduce traffic congestion. This would mean moving away from the current motoring taxation system and introducing a variable charging system depending on the level of road congestion. Issues discussed include: public attitudes, travel trends, options for national road pricing, institutional aspects of implementation, possible interim options to a national scheme, including the UK lorry road user charging scheme and local congestion charging pathfinder schemes. Amongst the report's conclusions, it finds that national road pricing is becoming feasible in the medium-term (in 10 to 15 years) and could meet the Government's objectives.

However, its successful implementation requires the promotion of a greater degree of public acceptance. Although a national scheme is still some years off, a number of practical steps can be taken now in preparation, including promoting a public debate to inform and raise awareness, with research into road users' behaviour and implications for business; working with car manufacturers in the development of vehicle technology standards; and working with local authorities on introducing local charging schemes to tackle congestion problems. This document is published alongside the Transport White Paper "The future of transport: a network for 2030" (Cm. 6234, ISBN 0101623429).

**Dawn of the Solar Age**  
Springer Science & Business Media  
International Seminar on Social Science, Humanities and Education (ISSHE) is motivated by efforts to increase the quality of research and respond to the development of studies related to social science, humanities and education fields. This seminar aims: (1) to bring together all scientists, researchers, practitioners, and

lecturers, (2) to share and discuss theoretical and practical knowledge about social science, humanities and education fields. The conference was held virtually by using Zoom on November, 25th 2020. The host of the conference was the Faculty of Cultural Sciences of Universitas Haluoleo, Kendari, Indonesia in collaboration with Graduate Program of Linguistics Universitas Warmadewa, Denpasar-Bali, Indonesia. By organising the seminar, it is expected it can be used as a scientific forum to accommodate discussions among young researchers originated from Indonesia in the fields of social science, humanities, and education. Therefore, the keynote speakers and invited speakers in the seminar are the researchers that are reputable and well-known in the world. We would like to thank the organising committee and the board of reviewers for their kind assistance and intention in reviewing all the papers. We would also extend our best gratitude to keynote speakers for their invaluable contributions and worthwhile ideas shared in the seminar. As a result, ISSHE is expected

to be able to be used as academic media to exchange ideas that will impact on conduction of any study related to social science, humanities, and education phenomena. *Advances in Conservation Research and Application: 2011 Edition* BoD – Books on Demand Sustainability of environment is an emerging global issue at present. Unsustainable or deteriorating environment is a matter of concern as it has threatened the survival of living creatures. Recently, climate change has been a matter of great concern at a global platform owing to imbalances in natural environment. Increasing population has increased the demand for energy, which has ultimately put pressure on natural resources and caused a paradigm shift from resource generation to exploitation. Emerging Energy Alternatives for Sustainable Environment aims to address the role of sustainable technologies in energy generation options for clean environment. It covers a wide spectrum of energy generation approaches, with an emphasis on five key topics: (i) renewable energy sources and

recent advances, (ii) emerging green technologies for sustainable development, (iii) assessment of biomass for sustainable bioenergy production, (iv) solid waste management and its potential for energy generation, and (v) solar energy applications, storage system, and heat transfer. This book provides essential and comprehensive knowledge of green energy technologies with different aspects for engineers, technocrats and researchers working in the industry, universities, and research institutions. The book is also very useful for undergraduate and graduate students of science and engineering who are keen to know about the development of renewable energy products and their corresponding processes. Please note: This volume is Co-published with The Energy and Resources Institute Press, New Delhi. Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka *Feasibility Study of Alternative Fuels for Automotive Transportation* Springer

Nature  
ProjectX India | 1st  
January 2023 edition  
provides you with power-  
packed information on  
227 projects, contracts  
and tenders from 75  
sectors and sub-sectors of  
the Indian economy. In  
this issue we have  
covered 77 projects in  
Conceptual/Planning  
Stage, 31 Contract  
Awards, 15 Project Under  
Implementation, 100  
Tenders, and 4 other  
projects. This e-book  
serves to all those who  
are interested to know  
and tap the project  
opportunities in the  
Construction,  
Infrastructure, and  
Industrial segment. Our  
aim is to serve you with  
the right information on  
upcoming and ongoing  
projects, contracts, and  
tenders from India. The  
business opportunities are  
coming to the fore each  
day, and we, at ProjectX,  
are eager to grab and  
provide the information  
which can make a  
difference to your  
business. Thank You and  
Happy Reading. Note:  
ProjectX India is also  
available on subscription  
basis, to know more, you  
can visit our website  
[www.projectxindia.com](http://www.projectxindia.com)  
ISSHE 2020 The Oil & Gas  
Year Limited  
This book expands the

body of scientific  
knowledge on research  
and solutions for  
alternative water  
systems. It addresses a  
wide variety of water  
management issues in  
buildings, ranging from  
the technical possibilities,  
hydraulic and financial  
efficiency, and public  
acceptance of  
decentralized water  
systems, to their impact  
on sewage systems.  
Climate changes,  
population growth, and  
progressive urbanization  
are the main causes of  
the growing interest in  
alternative sources of  
water around the world.  
Decentralized systems are  
seen not only as solutions  
that can effectively save  
water, but also as  
systems that can operate  
partially or completely  
independently of  
centralized suppliers. With  
these aspects in mind, the  
main focus of this book is  
on showcasing a new  
approach to water  
management at the  
building scale. The  
findings and insights  
presented here will  
support the development  
of future technical  
guidelines for using  
alternative water systems  
in urban areas - an aspect  
that is particularly  
important since, in many  
European countries, these

systems are only very  
rarely used.  
*Shell and Spatial  
Structures: Computational  
Aspects* BoD - Books on  
Demand  
Water saving is an  
important aspect civil  
engineering and building  
design around the world.  
Alternative water sources  
as well as water saving  
appliances have been  
studied by many  
researchers in order to  
maximize water savings in  
buildings and promote  
building design that  
favours water savings.  
This volume explores  
topics related to water  
savings: rainwater tank  
sizing and modelling,  
wastewater treatment and  
reuse, relationships  
between user behaviour  
and water savings, health  
issues related to water  
savings and  
environmental analysis of  
rainwater and grey water  
use in buildings. *Water  
Savings in Buildings* is a  
handy resource for  
researchers, post-  
graduate students,  
undergraduate students  
and engineers working in  
water utilities,  
environment agencies  
and associated industries  
interested in  
understanding the basics  
of implementing systems  
to achieve water savings  
in buildings.

**ProjectX India** ibidem-Verlag / ibidem Press  
 Petroleum is an art. To search for petroleum requires a multidisciplinary approach. The various geological, geophysical and geochemical surveys, points towards the most probable geographical locations, favorable geological structures.  
*Gasohol Economic Feasibility Study* Springer Nature  
 Fundamentals of Hydrogen Production and Utilization in Fuel Cell Systems provides a comprehensive overview of the complex and interdisciplinary issues surrounding the use of hydrogen fuel cells in the global transportation system. With a particular emphasis on the commercialization and implementation of hydrogen fuel cells, the book deals with production, utilization, storage and safety, and addresses the application of fuel cells in the road, rail, maritime and aviation sectors. For each sector, the book discusses the fundamentals of fuel cells, the current technical, environmental, safety, and economic performance, the main barriers to implementation and how

to address them. This book is an invaluable reference for researchers, graduate students and industry engineers across the fuel cells and transportation sector, but is also ideal for policymakers involved in the energy transition. Offers the first account of hydrogen fuel cell systems that considers every sector: road, rail, maritime and aviation. Focuses on the practical utilization and implementation of hydrogen fuel cells in transportation systems. Summarizes the latest research and developments in hydrogen fuel cell powered transportation.  
**Handbook of Research on Impacts of International Business and Political Affairs on the Global Economy**  
 CRC Press  
 Cities are growing as never before and nowadays, it is estimated that at least 50% of the world's population lives in urban areas. This trend is expected to continue and simultaneously the problems in urban areas are anticipated to have an increase. Urbanization constitutes a complex process involving problems with social, economic, environmental and spatial dimensions

that need appropriate solutions. This book highlights some of these problems and discusses possible solutions in terms of organisation, planning and management. The purpose of the book is to present selected chapters, of great importance for understanding the urban development issues, written by renowned authors in this scientific field. All the chapters have been thoroughly reviewed and they cover some basic aspects concerning urban sustainability, urban sprawl, urban planning, urban environment, housing and land uses. The editor gratefully acknowledges the assistance of Dr Marius Minea in reviewing two chapters.  
*Handbook of Water Harvesting and Conservation* Lulu.com  
 The growth of global commerce depends on many different factors and strategies in order for multinational corporations to efficiently compete and thrive in the international marketplace. In addition to business strategies, corporations must also be aware of political affairs that may impact their global economic status. The Handbook of

Research on Impacts of International Business and Political Affairs on the Global Economy features dual perspectives on the business and political viewpoints for nations striving to maintain their economic standing in the era of globalization. Providing insight into various economic factors impacting global businesses and international affairs, this publication is a critical reference source for students, policymakers, international diplomats, researchers, scholars, and practitioners interested in financial challenges in the era of globalization.

*Feasibility Study Fuel Cell Cogeneration in a Water Pollution Control Facility*  
World Bank Publications

Water harvesting is gaining more and more recognition as a sustainable and resilient water supply options. It is economically viable, socially compatible and environmentally friendly. Water harvesting has proven to be a robust solution to overcome or reduce water shortages all over the world. It is important to understand how to apply this practice in a sustainable and

effective way to make full use of its potential in a world increasingly threatened by water scarcity. The Handbook of Water Harvesting and Conservation: Basic Concepts and Fundamentals is the most comprehensive, up-to-date and applied handbook on water harvesting and conservation yet published. The book's 30 chapters -- written by 84 outstanding international experts from approximately 20 selected countries faced by drought -- explore, critique and develop concepts and systems for water harvesting. The editors bring together many perspectives into a synthesis that is both academically based and practical in its potential applications. The Handbook of Water Harvesting and Conservation: Basic Concepts and Fundamentals is an important tool for education, research and technical works in the areas of soil, water and watershed management and is highly useful for drought strategy planning, flood

management and developing techniques to adapt to climate change in urban, agricultural, forest and rangeland areas.
