'Despite the overwhelming reality of economic decline; despite unimaginable poverty; despite wars, malnutrition, disease and political instability, African cultural productivity grows apace: popular literatures, oral narrative and poetry, dance, drama, music and visual art all thrive.' - Kwame Anthony Appiah, In My Father's House This collection of essays examines the way in which

African popular culture has moved centre stage since the early 1980s. The emphasis is on the verbal rather than the visual, and topics covered include the oral tradition, and women in popular culture. KARIN BARBER is Professor of African Cultural Anthropology at the University of Birmingham Published in association with the International African Institute North America: Indiana University Press

Reframing Antifascism Walter de Gruyter GmbH & Co KG

Issues in African American Music: Power, Gender, Race, Representation is a collection of twenty-one essays by leading scholars, surveying vital themes in the history of African American music. Bringing together the viewpoints of ethnomusicologists, historians, and performers, these essays cover topics including the music industry, women and gender, and music as resistance, and explore the stories of music creators and their communities. Revised and expanded to reflect the latest scholarship, with six all-new essays, this book both complements the previously published volume African American Music: An Introduction and stands on its own. Each chapter features a discography of recommended listening for further study. From the antebellum period to the

present, and from classical music to hip hop, this wide-ranging volume provides a nuanced introduction for students and anyone seeking to understand the history, social context, and cultural impact of African American music.

Billboard McGill-Queen's Press - MQUP

This book features selected papers presented at the Fifth International Conference on Nanoelectronics, Circuits and Communication Systems (NCCS 2019). It covers a range of topics, including nanoelectronic devices, microelectronics devices, material science, machine learning, Internet of things, cloud computing, computing systems, wireless communication systems, advances in communication 5G and beyond. Further, it discusses VLSI circuits and systems, MEMS, IC design and testing, electronic system design and manufacturing, speech signal processing, digital signal processing, FPGA-based wireless communication systems and FPGA-based system design, Industry 4.0, e-farming, semiconductor memories, and IC fault detection and correction.

Why was Switzerland spared a German attack during World War II? Was its existence actually

endangered at any time? In *Let's Swallow Switzerland*, historian Klaus Urner reveals new data uncovered about the actual threats Switzerland faced during the war. Extensive archival research into the events at the Führer's headquarters discloses that Hitler, in cooperation with Mussolini, initiated a surprise pincer operation against Switzerland during the final phase of the French campaign. On June 24, 1940, Army Corps C received orders to prepare for the Special Task Switzerland. In early July, the 12th Army, with nine divisions, was deployed near the Western border of Switzerland. Urner proves that German operational plans were not fictitious designs worked out by a bored staff, as has been claimed, but in fact were serious preparatory measures for an attack. The second half of this fascinating exposé provides a discussion of German economic warfare against Switzerland, revealing that Germany's goal was to control every interaction between Switzerland and the Allies--such attempts continued until the total occupation of France on November 11, 1942. Numerous original documents attesting to Hitler's plans, historic photographs, and a detailed bibliography make this book a fundamental work for understanding Switzerland's difficult predicament during World War II.

Nanoelectronics, Circuits and Communication Systems James Currey

The previous Saas-Fee Advanced Course dedicated to the interstellar medium took place in 1972. The tremendous scientific advances that have occurred in this field since then, in particular owing to the availability of receivers working at completely unexplored wavelength bands, fully justified a new set of lectures. As a consequence, the members of the Swiss Society for Astrophysics and Astronomy voted that "The Galactic Interstellar Medium" should be the subject of the 1991 course. The 21st Saas Fee Advanced Course took place in Les Diablerets from 18 to 23 March 1991, gathering together about 80 participants from all over the world, but mostly from Europe. According to a rule that has proved to lead to success, but also to challenge the lecturers' energy, the format of a Saas-Fee Advanced Course consists traditionally of 28 lectures of 45 minutes which take place in the morning and late afternoon, leaving ample time for discussions, self-study, hiking or skiing. Despite the inordinate work load imposed, this year's lecturers felt that the subject was sufficiently dense to increase the lecture time by 1/3! This proved judicious and left more time for questions and discussions during the lectures.

Issues in African American Music Springer

Over a half century of exploration of the Earth's space environment, it has become evident that the interaction between the ionosphere and the magnetosphere plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields. Interestingly, it was recently discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system. Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014, this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm-changing role that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments. The 2014 Chapman conference marks the 40th anniversary of the initial magnetosphere-ionosphere coupling conference at Yosemite in 1974, and thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling processes. Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities. Topics covered in this volume include: Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasmas The unified global modeling of the ionosphere and magnetosphere at the Earth and other planets New knowledge of these coupled interactions for heliophysicists and planetary scientists, with a cross-disciplinary approach involving advanced measurement and modeling techniques Magnetosphere-Ionosphere Coupling in the Solar System is a valuable resource for researchers in the fields of space and planetary science, atmospheric science, space

physics, astronomy, and geophysics. Read an interview with the editors to find out more:

Our subject is, of course, nothing more than applied physics and chemistry. But in addition to those basic sciences the student of planetary atmospheres needs an overview of atmospheric structure and physical processes as presently understood. This book is intended to help fill that need for both graduate students and research scientists. Although the approach is mainly theoretical, very little basic physics is developed here. Material that is standard fare in third- and fourth-year physics courses is simply absorbed where needed.

A McGill University history professor provides a comprehensive account of the German opposition's struggle against Hitler, covering all the serious attempts to overthrow or assassinate him leading up to the failed attempt of 20 July 1944. First published in West Germany in 1969 by R. Piper and Co. as *Widerstand, Staatsstreich, Attentat*, this volume first appeared in English, published by MacDonald and Jane's and MIT Press, in 1977. Greta Kuckhoff belonged to the anti-Nazi group, 'The Red Orchestra'. She survived the War and spent the next thirty years working to commemorate their resistance. Using previously unpublished sources, this book traces the interventions of this key figure and raises provocative questions about remembering antifascism in contemporary Germany.

The breadth of scientific and technological interests in the general topic of photochemistry is truly enormous and includes, for example, such diverse areas as microelectronics, atmospheric chemistry, organic synthesis, non-conventional photoimaging, photosynthesis, solar energy conversion, polymer technologies, and spectroscopy. This Specialist Periodical Report on Photochemistry aims to provide an annual review of photo-induced processes that have relevance to the above wide-ranging academic and commercial disciplines, and interests in chemistry,

physics, biology and technology. In order to provide easy access to this vast and varied literature, each volume of Photochemistry comprises sections concerned with photophysical processes in condensed phases, organic aspects which are sub-divided by chromophore type, polymer photochemistry, and photochemical aspects of solar energy conversion. Volume 34 covers literature published from July 2001 to June 2002. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist, with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis.

Music at Michigan

voltage-gated calcium channels are essential mediators of a range of physiological functions, including the communication between nerve cells, the regulation of heart beat, muscle contraction, and secretion of hormones such as insulin. Consequently, these channels are critical pharmacological targets in the treatment of a variety of disorders, such as epilepsy, hypertension, and pain. Voltage-gated calcium channels have therefore been subject to intense study by numerous investigators over the past few decades, and an immense body of work has accumulated. In this book, we provide the first comprehensive overview of our current state of knowledge concerning this exciting field of research. Leading off with a general review of calcium signaling and techniques to measure calcium channel activity, the book delves into a provocative overview of the history of the calcium channel field, contributed by one of the key pioneers in the field. Dr. Richard Tsien. This is followed by an in depth review of the biochemical and molecular biological characterization of calcium channel genes by Drs. Catterall and Snutch whose research has resulted in major advances in the calcium channel field. A number of chapters are dedicated towards various aspects of calcium channel structure and function, including channel gating, permeation, modulation and interactions with members of the exocytotic machinery—contributed by both established leaders and rising stars in the field.

The very first thing one does in all situations of life is orient oneself. Decisions of orientation, which are mostly made under uncertainty and the pressure of time, largely determine subsequent decisions. But what is orientation? The problems of orientation are as old as humankind, the word is used everywhere, but the concept has never been thoroughly investigated. The philosopher Werner Stegmaier comprehensively clarifies for the first time the conditions and structures of orientation, including those of our sexual, economic, media, political, legal, scientific, artistic, religious, moral, and ethical orientations. He thereby establishes a new philosophical language and offers a philosophy for our time. "As if I unexpectedly slipped down into a deep vortex, I am swirled around in a way that I can neither put a foot down, nor swim to the surface. Nonetheless, I will work my way out ... " (René Descartes, Philosopher) "As often as my speculation seems to lead me too far from the paved road of common sense, I stand still and seek to orient myself. I look back at the point from which we started, and I seek to compare the two guideposts I have." (Moses Mendelssohn, Philosopher) "A philosophical problem has the form: 'I do not know my way about.'" (Ludwig Wittgenstein, Philosopher) "The second O, orientation – as the repository of our genetic heritage, cultural tradition, and previous experiences – is the most important part of the O-O-D-A loop since it shapes the way we observe, the way we decide, the way we act." (John Boyd, Military Strategist)
