The Aermotor Windmill
Company, which
commenced operations in
Chicago in 1888, is the
nation's sole remaining
full-time manufacturer of
water-pumping machines.

The company's imprint on rural America, particularly across the West, is still visible today in the tens of thousands of its windmills that bring water to the earth's surface. Still Turning is the first book to explore the rise of the American windmill through the experience of this important company. Aermotor founder La Verne Noyes and engineer Thomas Perry developed and perfected the all-metal wind pump in the 1880s. Within a decade, the "mathematical windmill" began to

dominate the market. Aermotor continued to expand and innovate. The ruggedness and simplicity of the American mechanical windmill has allowed it to outlast many newer water-pumping technologies over the years with minimal maintenance and oversight. Christopher C. Gillis traces this story and more, from the early days of the company to Aermotor's present-day relevance as it continues to produce its iconic windmills. Still Turning is a significant contribution

not only to the history of wind power but also to the history of American enterprise.

Building Age Texas A&M University Press

The technical problems confronting different societies and periods and the measures taken to solve them form the concern of this annual collection of essays. It deals with the history of technical discovery and change and explores the relationship of technology to other aspects of life - social, cultural and economic - showing how

technological development has shaped, and been shaped by, the society in which it occurred.

Water & Sewage Works

R.I.C. Publications
Beginning with the Weathermen explosion in Greenwich Village and ending with punk, the seventies was the age of extremes; sex, drugs and, of course, rock 'n' roll. With an extraordinary cast of characters, and even more extraordinary anecdotes, In The Seventies tells, firsthand, the story - and stories - of the decade. From Allen Ginsberg's hippie commune in upstate New York to the time Miles spent cataloguing William Burroughs' archives in

London, from David Bowie in drag to Grace Jones naked at Studio 54, it's all here. Vivid, compelling, intimate and, sometimes, insane, Barry Miles reveals the truth behind this legendary era.

The Building News and Engineering Journal MIT Press

Grid beam is a modular, reusable building system that is fast, easy, affordable and virtually goof-proof. Ordinary people, with few skills and even fewer tools (all you need is a wrench!) can

tackle projects ranging from furniture and shop benches to more ambitious projects like wind turbines, truck racks, small buildings--even electric vehicles. Grid beam's modular pieces and bolt-together construction make the system fast and straightforward to work with. It has all the advantages of an industrial building system: standard, modular sizes; uniform materials; and interchangeable parts. Projects knock flat and are easy to transport. Since

the pieces can be used over and over again, grid beam is easy both on your wallet and on the environment -- the authors have been using some of their components for over 30 years. How to Build with Grid Beam includes hundreds of photos of real projects built over a 60-year period, showing the many uses of grid beam, from shelves for college students to projects involving alternative energy. The versatility of grid beam is inspiring, for beginners, more

experienced do-it-yourselfers, and innovators who will develop their own designs. Even school-age children can use grid beam to build simple projects. *Popular Mechanics* UPNE Traces the history of the use of windmills in the United States and surveys the various types of American windmills **The Engineering Record, Building Record and the Sanitary Engineer** The twentieth anniversary edition of the classic

architectural study of the development of the connected farm buildings made by 19th-century New Englanders, which offers insight into the people who made them. *Appropriation for Federal Control of Transportation Systems [second Hearing]*. Vols. 76 , 83-93 include Reference and data section for 1929 , 1936-46 (1929- called Water works and sewerage data section) *CBI Water Tower News* Monthly magazine devoted to topics of

general scientific interest.
