This special edition of Greg Mankiw's intermediate macroeconomics textbook takes the same approach that made the parent text a bestseller, but with coverage shaped to address fiscal policy, monetary/exchange-rate policy, deficit reduction, and other critical economic issues from the uniquely Canadian perspective. Like Mankiw's *Macroeconomics*, the Canadian edition teaches fundamentals by relating theoretical concepts to big issues and policy debates, but illustrates those ideas and discussions with examples and cases from Canada, as well as research by

Canadian economists.

For decades, Milton Santos (1926-2001) has been considered one of the most influential thinkers in Brazilian and Latin American social sciences and geography. Yet his writings, most of which have not been translated into English, are largely unknown to European and North American audiences. This book introduces English-speaking scholars to Professor Santos through critical engagement with his ideas and writings. The chapters presented here reveal the breadth and originality of his critical thought, as well as its ongoing importance to contemporary debates. The book features a

biography of Santos and includes an annotated translation of one of his most-cited texts, *The Return of the Territory*, offered here for the first time in English. This text demonstrates how Santos's provocative insights continue to transform core concepts of political and human geography. The book also includes a number of short chapters written by scholars from Brazil, Spain and France. Through reflections on Santos's work, the various authors demonstrate the value and possibilities of extending the geographer's theories. They explore key geographical themes across political economy, rural studies, territorial planning, environmental crisis, digital networks, indigenous peoples, transportation and public health. This collection invites geographers from around the world to engage with this rich intellectual tradition from Brazil.

Basic Skills for the Workplace HarperCollins Publishers

This book examines the increasing popularity of creativity and play in tertiary learning, and how it can be harnessed to enhance the student

experience at university. While play is often misunderstood as something 'trivial' and associated with early years education, the editors and contributors argue that play contributes to social and human development and relations at a fundamental level. This volume invalidates the commonly held assumption that play is only for children, drawing together numerous case studies from higher education that demonstrate how researchers, students and managers can benefit from play as a means of liberating thought, overturning obstacles and discovering fresh approaches to persistent challenges. This diverse and wide-ranging edited collection unites play theory and practice to address the gulf in research on this fascinating topic. It will be of interest and value to educators, students and scholars of play and creativity, as well as practitioners and academic leaders looking to incorporate play into the curriculum.

This book provides an analysis of the European policy approach to

combined heat and power (CHP), a highly efficient technology used by all EU Member States for the needs of generating electricity and heat. European Law on Combined Heat and Power carries out an assessment of the European legal and policy measures on CHP, evaluating how it has changed over the years through progress and decline in specific member states. Over the course of the book, Sokołowski explores all aspects of CHP, examining the types of measures used to steer the growth of cogeneration in the EU and the policies and regulatory tools that have influenced its development. He also assesses the specific role of CHP in the liberalisation of the internal energy market and EU action on climate and sustainability. Finally, by delivering his notions of "cogenatives", "cogenmunities", or "Micro-Collective-Flexible-Smart-High-Efficiency cogeneration", Sokołowski considers how the new EU energy package - "Clean energy for all Europeans" - will shape future developments. This book will be of great interest to students and scholars of energy law and

regulation, combined heat and power and energy efficiency, as well as policy makers and energy experts working in the CHP sector.

Plato is the best known, and continues to be the most widely studied, of all the ancient Greek philosophers. The updated and original essays in the second edition of the Oxford Handbook of Plato provide in-depth discussions of a variety of topics and dialogues, all serving several functions at once: they survey the current academic landscape; express and develop the authors' own views; and situate those views within a range of alternatives. The result is a useful state-of-the-art reference to the man many consider the most important philosophical thinker in history. This second edition of the Oxford Handbook of Plato differs in two main ways from the first edition. First, six leading scholars of ancient philosophy have contributed entirely new chapters: Hugh Benson on the Apology, Crito, and Euthyphro; James Warren on the Protagoras and Gorgias; Lindsay Judson on the Meno; Luca Castagnoli on

the Phaedo; Susan Sauvé Meyer on the Laws; and David Sedley on Plato's theology. This new edition therefore covers both dialogues and topics in more depth than the first edition did. Secondly, most of the original chapters have been revised and updated, some in small, others in large, ways.

Macroeconomic Theory And Policy (2nd Edition) Worth Publishers

Megacity development and the inherent risks and opportunities for humans and the environment is a theme of growing urgency in the 21st century.

Focusing on Latin America where urbanization is most advanced, this book studies the complexity of a 'mega-urban system' and explores interrelations between sectors and issues by providing an in-depth study of one particular city, Santiago de Chile. The book attempts to (i) focus on the emergence

of risk in megacities by analyzing risk elements, (ii) evaluate the extent and severity of risks, (iii) develop strategies to cope with adverse risks, and (iv) to guide urban development by combining concepts with empirical evidence.

Drawing on the work of an interdisciplinary and international consortium of academic and professional partners, the book is written for scholars in cross-cutting areas of urban, sustainability, hazard, governance and planning research as well as practitioners from local, regional and international organizations.

The definitive graduate textbook on modern macroeconomics
Macroeconomic Theory is the most up-to-date graduate-level macroeconomics textbook available today. This revised second edition emphasizes the general equilibrium character of macroeconomics to explain effects across the whole economy while taking into account recent research in the field. It is the perfect resource for students and researchers seeking coverage of the most current developments in macroeconomics. Michael Wickens lays out the core ideas of modern macroeconomics and its links with finance. He presents the simplest general equilibrium macroeconomic model for

a closed economy, and then gradually develops a comprehensive model of the open economy. Every important topic is covered, including growth, business cycles, fiscal policy, taxation and debt finance, current account sustainability, and exchange-rate determination. There is also an up-to-date account of monetary policy through inflation targeting. Wickens addresses the interrelationships between macroeconomics and modern finance and shows how they affect stock, bond, and foreign-exchange markets. In this edition, he also examines issues raised by the most recent financial crisis, and two new chapters explore banks, financial intermediation, and unconventional monetary policy, as well as modern theories of unemployment. There is new material in most other chapters, including macrofinance models and inflation targeting when there are supply shocks. While the mathematics in the book is rigorous, the fundamental concepts presented make the text self-contained and easy to use. Accessible, comprehensive, and wide-ranging, Macroeconomic

'Way Beyond Bigness' is a design-research project that studies the Mekong, Mississippi and Rhine river basins, with particular

focus on multi-scaled, water-based infrastructural transformation. The book proposes a simple, adaptive framework that utilises a three-part, integrative design-research methodology, structured as: Appreciate + Analyze, Speculate + Synthesize, and Collaborate + Catalyze. To do such, 'Way Beyond Bigness' realigns watersheds and architecture across multiple: scales (site to river basin), disciplines (ecologists to economists), narratives (hyperbolic to pragmatic), and venues (academic to professional). The book highlights the author's comprehensive work of over more than a decade, including in depth field research across the Mekong, Mississippi and Rhine, along with a diverse body of academic and professional collaborations, ranging from the speculative to the community-based. Macroeconomic Theory Springer Science & Business Media
 Using the career of Peter Paul Rubens as an organizing thread, this conference proceeding examines the complex relationships between diplomacy, dynastic

politics and the visual arts during the early part of the Thirty Years War.

What role did exchanges of art and artists play in the diplomacy of this period? How did these exchanges contribute to the development of international formulas for the visual representation of power and glory? To what extent had dynastic alliances and diplomacy created a shared visual language of power and authority throughout much of Europe, as opposed to distinctive national, dynastic or even personal formulas favored by particular patrons? What similarities and dissimilarities can we detect by comparing the relationship between high politics and the visual arts in different European courts? By addressing these and other related questions, not only Rubens's own work is illuminated but also the interplay between international dynastic politics and the visual language of power more generally during a critical fifteen year period.

 Preface: Methodological principle follow is to develop the aggregate macroeconomic functions from basic microeconomic principles. The technique developed naturally in the Princeton lectures in response to a division among the students roughly into one group with a good economics background but little mathematics and another mostly engineers-with mathematical training but little economics.
