Cross-cultural research is now an undeniable part of mainstream psychology and has had a major impact on conceptual models of human behavior. Although it is true that the basic principles of social psychological methodology and data analysis are applicable to cross-cultural research, there are a number of issues that are distinct to it, including managing incongruities of language and quantifying cultural response sets in the use of scales. Cross-Cultural Research Methods in Psychology provides state-of-the-art knowledge about the methodological problems that need to be addressed if a researcher is to conduct valid and reliable cross-cultural research. It also offers practical advice and examples of solutions to those problems and is a must-read for any student of culture.

The use of printed words to capture language is one of the most remarkable inventions of humankind, and learning to read them is one of the most

remarkable achievements of individuals. In recent decades, how we learn to read and understand printed text has been studied intensely in genetics, education, psychology, and cognitive science, and both the volume of research papers and breadth of the topics they examine have increased exponentially. Theories of Reading Development collects within a single volume state-of-the-art descriptions of important theories of reading development and disabilities. The included chapters focus on multiple aspects of reading development and are written by leading experts in the field. Each chapter is an independent theoretical review of the topic to which the authors have made a significant contribution and can be enjoyed on its own, or in relation to others in the book. The volume is written for professionals, graduate students, and researchers in education, psychology, and cognitive neuroscience. It can be used either as a core or as a supplementary text in senior undergraduate and graduate education and psychology courses focusing on reading development.

Psychology for India Springer Science & Business Media

This book examines how and where psychology can engage itself in the framing of social policies for national as well as human development in India. Although the role that psychological knowledge can play in informing social policy decisions has been discussed for a long time, psychologists by and large have had little role in framing policy decisions related to such important domains as education, health, social justice and social inclusion. Policy makers, not only in India, but more or less everywhere have focused on interventions at the macro level, which has led them to ignore the root causes of the problems lying at the micro level. However, with the more humanistic approaches now being followed by economists and other social scientists, the person in society is slowly taking centre stage. Micro-level variables like happiness, the wellbeing of individuals and the social relationships within which people define themselves are becoming important. Therefore, this book discusses important psychological issues related to human development; particularly, health and education, social justice, social integration, environment and work organizations, besides focusing on some general issues relating to the logic of making social policies. It is a first-ever attempt in India to inform policy makers about how micro-variables can be a crucial factor to consider while framing social policies.

The developments in linguistic theory over the last three decades have given us a better understanding of the formal properties of language.

However, as the truism goes, language does not exist in a vacuum. It in teracts with a cognitive system that involves much more than language and functions as the primary instrument of human communication. A theory of language must, therefore, be based on an integration of its for mal properties with its cognitive and communicative dimensions. The present work is offered as the modest contribution to this research paradigm. This book is a revised and slightly enlarged version of my doctoral thesis submitted to the University of Illinois at Urbana-Champaign. In writing the original version, I had the privilege of working with Professor Charles E. Osgood, who is widely recognized as the founder and one of the leading figures of modern psycholinguistics. I have benefited from ex tensive and stimulating discussions with him, not only on this topic but in the development of his theory of language performance in general (see his Lectures on Language Performance, 1980, in this series). However, the re sponsibility for the particular formulations of the theory, hypotheses, in terpretations, and conclusions found in this work-which have been in fluenced, no doubt, by my training as a linguist, rather than as a psychologist-are my own.
