Understanding Business Statistics is a
highly student-oriented business
statistics product that makes statistics
understandable for students with a wide
variety of statistics backgrounds. The
authors provide an intuitive discussion of
basic statistical principles rather than a
mathematically rigorous development.
They use simple examples to introduce
and develop concepts and procedures.
For ease of reading, chapter sections are
designed to ensure easy-to-follow
continuity from one section to the next.
This text provides students with frequent
opportunities to check their
understanding of topics as they move
through the chapters, with exercises
included at the end of most sections. In
many cases, the exercises have been
designed to extend chapter discussions
rather than solely provide opportunities

for drill and repetition. Understanding
Business Statistics is written using a
modular approach, allowing students to
approach the subject step-by-step with
very clear instructions.

Technologies and Approaches to
Reducing the Fuel Consumption of
Medium- and Heavy-Duty Vehicles
evaluates various technologies and
methods that could improve the fuel
economy of medium- and heavy-duty
vehicles, such as tractor-trailers, transit
buses, and work trucks. The book also
recommends approaches that federal
agencies could use to regulate these
vehicles' fuel consumption. Currently
there are no fuel consumption standards
for such vehicles, which account for
about 26 percent of the transportation
fuel used in the U.S. The miles-per-gallon
measure used to regulate the fuel
economy of passenger cars. is not
appropriate for medium- and heavy-duty
vehicles, which are designed above all to
carry loads efficiently. Instead, any
regulation of medium- and heavy-duty
vehicles should use a metric that reflects
the efficiency with which a vehicle
moves goods or passengers, such as
gallons per ton-mile, a unit that reflects
the amount of fuel a vehicle would use
to carry a ton of goods one mile. This is
called load-specific fuel consumption
(LSFC). The book estimates the
improvements that various technologies
could achieve over the next decade in
seven vehicle types. For example, using
advanced diesel engines in tractor-
trailers could lower their fuel
consumption by up to 20 percent by

2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.

But since the current sweep of global change is transforming the face of warfare, Special Operations Forces (SOF) must adapt to these circumstances. Fortunately, adaptation is in the SOF DNA. This book examines the changes affecting SOF and offers possible solutions to the complexities that are challenging many long-held assumptions. The chapters explore what has changed, what stays the same, and what it all means for U.S. SOF. The authors are a mix of leading experts in technology, business, policy, intelligence, and geopolitics, partnered with experienced special operators who either cowrote the chapters or reviewed

them to ensure accuracy and relevance for SOF. Our goal is to provide insights into the changes around us and generate ideas about how SOF can adapt and succeed in the emerging operational environment.

Ideal for students with little or no background in philosophy, *Ethical Choices: An Introduction to Moral Philosophy with Cases, Second Edition*, provides a concise, balanced, and highly accessible introduction to ethics. Featuring an especially lucid and engaging writing style, the text surveys a wide range of ethical theories and perspectives including consequentialist ethics, deontological ethics, natural and virtue ethics, the ethics of care, and ethics and religion. Each chapter includes compelling case studies that are carefully matched with the theoretical material. Many of these cases address issues that students can relate directly to their own lives: the drinking age, student credit card debt, zero

tolerance policies, grade inflation, and video games. Other cases discuss current topics like living wills, obesity, human trafficking, torture "lite," universal health care, and just-war theory. The cases provide students with practice in addressing real-life moral choices, as well as opportunities to evaluate the usefulness and applicability of each ethical theory. Every case study concludes with a set of "Thought Questions" to guide students as they reflect upon the issues raised by that case.

A Political Science Manifesto for the Age of Populism Taylor & Francis

The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.
