An insider's guide to the coming philanthropic revolution Meet the next generation of big donors—the Gen X and Millennial philanthropists who will be the most significant donors ever and will shape our world in profound ways. Hear them describe their ambitious plans to revolutionize giving so it achieves greater impact. And learn how to help them succeed in a world that needs smart, effective donors now more than ever. As “next gen donors” step into their philanthropic roles, they have not only unprecedented financial resources, but also big ideas for how to wield their financial power. They want to disrupt the traditional world of charitable giving, and they want to do so now, not after they retire to a life of philanthropic leisure. Generation Impact pulls back the curtain on these rising leaders and their “Impact Revolution,” offering both extensive firsthand accounts and expert analysis of the hands-on, boundary-pushing, unconventional strategies next gen donors are beginning to pursue. This fascinating book also shows another side of the donors in Generation Impact: they want to respect the past even as they transform the future. They are determined to honor the philanthropic legacies and values they've inherited by making big giving more effective than ever before. If they succeed, they can make historic progress on causes from education to the environment, from human rights to health care. Based on years of research and close engagement

with next gen donors, Generation Impact offers a unique profile of the new faces of philanthropy. Find out, directly from them: How they want to revolutionize giving to expand its positive impact on our lives and our communities. Which causes interest them, how they want to engage with those causes ... and, perhaps more important, how they do not want to engage. Which new tools and strategies for change excite them most. What they are learning from previous generations, and what they want to bring to their work alongside those generations. How we can all ensure their historic potential is channeled in ways that make our world better. The Impact Revolution will be messy, but it could also result in solutions for some of our most persistent problems. Generation Impact offers targeted, practical advice to parents, families, and their advisors, as well as nonprofit professionals—those who work closest with these next gen donors—on how to engage, nurture, and encourage them as they reshape major giving and make their mark on history. Help them channel their enthusiasm—and their wealth—to make the most positive difference in a world with such great need.

As a third-class cadet at the US Air Force Academy in July of 1970, I saw the war in Vietnam as a major determinant of my future. I just did not know then what part

I might play in the conflict and felt a youthful, impatient need to decide on my Air Force career so I could see myself in what looked like the war of my generation. I found my calling on a beautiful California afternoon when 22 of us cadets were treated to a ride in an HH- 53C Super Jolly Green Giant of the Air Rescue and Recovery Service, a part of the Military Airlift Command. I enjoyed the ride. I sat beside a pararescueman, or "PJ," looking out at the treetops as we skimmed along. Turns were exciting, with the crew windows open up front and the wind flowing through the cabin. Unlike the rides I had taken in fighters and bombers, I was not breathing through a rubber mask, and I felt like I was in touch with the world below-a participant instead of a spectator. Afterwards, TSgt Stu Stanaland, the PJ, explained that the pilot, Maj Marty Donohue, was one of the best in the rescue business. Months later back in school, we were all captivated by news of the attempt to rescue US prisoners of war (POW) at Son Tay in North Vietnam. When I learned that the raid had been conducted using rescue helicopters, I read all I could find about the mission. President Nixon later decorated the mission leaders, saying they had performed flawlessly and fought courageously without losing a man; and the mission had not succeeded only because of bad intelligence-the POWs had been moved from the Son Tay camp. As I watched the presentation on television, I spotted Major Donohue among the honorees. Now I was hooked. I made a career decision to fly helicopters, get into rescue, and join those guys for life. That resolution held up through my senior year when the commandant of cadets told all us prospective helicopter pilots we were

making a mistake that would deny us a rewarding career. "If you become helicopter pilots, you will not be in my Air Force," he said. Still, it was what I wanted most to do and what I did. While in HH-53 transition, the most respected instructor pilot-an Air Force Cross recipient named Ben Orrell-told me rescue was a job to be proud of and that it would be sufficient in itself to make a career rewarding. Soon after, and still a second lieutenant, I flew my first combat mission-the Mayaguez recovery in 1975. We flew as wingman to another HH-53, which included Sergeant Stanaland among its crew members. I had joined those rescue guys. The years between then and now have seen many changes but almost nothing new. The rescue men-and now also women- are called to enter dangerous territory, flying low and slow, going where a usually faster, less-vulnerable aircraft has recently been shot down. Instead of having a couple of days' time to prepare and entering the mission into the air tasking order (ATO) several days prior to execution, the rescue folks go there from a "cold start" launch from alert status. They could enhance their preparation by reading the ATO and plotting where the danger areas for shoot-downs might be, but a large, complex air campaign may cover an entire country. As you may deduce from this book, a major lesson learned from Desert Storm is that making the command and control arrangements murky and time-consuming further complicates the task of air rescue. Also, they may not be adequately equipped for the mission, yet the demand for immediate, must-succeed operations remains. During the first Gulf War of 1991, air rescue was in a state of transition and largely performed by aircraft and crews assigned to special

operations units.

The one book every parent, teacher, coach, and youth pastor should read. This landmark book paints a compelling- and sobering-picture of what could happen to our society if we don't change the way we relate to today's teens and young adults. Researched-based and solution-biased, it moves beyond sounding an alarm to outlining practical strategies to: * Guide "stuck" adolescents and at-risk boys to productive adulthood * Correct crippling parenting styles * Repair damage from (unintentional) lies we've told kids * Guide them toward real success instead of superficial "self-esteem" * Adopt education strategies that engage (instead of bore) an "i" generation * Pull youth out of their "digital" ghetto into the real world * Employ their strengths and work with their weaknesses on the job * Defuse a worldwide demographic time bomb * Equip Generation iY to lead us into the future

Saving Succeeding Generations from the Scourge of War Palabra

Should Adam Have Taken the Liberty to Rescue All Generations? is basically about God's wonderful creation of the heavens and earth and everything in them and Adam's failure to obey God's command not to eat from the tree of knowledge of good and evil, which brought about the great sins to all

generations. Adam's action also brought about the first of the Great Towel of Babel, the Great Flood and the Great Exodus, after the Great Sin. I also wished that Adam would have prayed to God to possibly be allowed to cut the tree of knowledge of good and evil down in an effort to prevent the great sin. God commanded that Adam shall not eat from the tree of knowledge of good and evil, but there is no mention concerning touching it. Eve, who was not present when God gave Adam the command, came along and added the word touch. And if the tree was cut down, Satan of old certainly would not have had an opportunity to tempt neither Adam nor Eve. So basically, I am praying and I wish the whole world would read my book and pray for God to bring back fellowship on Earth with him. What a time that would be and what a time it would have been to hang out with the likes of Adam, Noah, Abraham, Isaac, Jacob, Joseph, Moses, and Jesus Christ during these modern-day times if it wasn't for Adam's great sin. That's basically what my book is all about—having no sins, no oldness, and no death, only fellowship with God on Earth.

A new epidemic is gripping the world. You can see it in San Antonio and London, in Beijing and Tashkent: Far too many kids are far too fat, putting them on track to becoming the first generation in history to have a shorter life expectancy than their parents. And it's not their fault. It's not their parents' fault, either. It's not even entirely Ronald McDonald's fault, although it's time for him to wipe that smile off his face. Obesity is the biggest threat to our children's health today, and it's up to us to get serious about defending kids against it. Generation Extra Large reveals the cultural and economic causes of childhood obesity. It's not only television, video games and junk food. Parents work long hours that disrupt family eating and exercise. Schools compound the problem by lining the halls with soda machines, serving fast food and cutting back physical education and recess. Poverty plays a key role, with kids growing up in neighborhoods where it's too dangerous to play and where unhealthy food is affordable and all too easy to get. But there is hope. Dedicated parents, educators, physicians, and community leaders are working to find creative, effective ways of helping our children slim down and stay healthy. The authors give voice to these crusaders, and provide checklists, interactive tests, and nutritional guides for concerned readers. Generation Extra Large explains why the epidemic has grown, reveals the consequences it has in store for our young people-and gives

us tools to fight it.

In *Zero Hour for Gen X*, Matthew Hennessey calls on his generation, Generation X, to take a stand against tech-obsessed millennials, apathetic baby boomers, utopian Silicon Valley "visionaries," and the menace to top them all: the soft totalitarian conspiracy known as the Internet of Things. Soon Gen Xers will be the only cohort of Americans who remember life as it was lived before the arrival of the Internet. They are, as Hennessey dubs them, "the last adult generation," the sole remaining link to a time when childhood was still a bit dangerous but produced adults who were naturally resilient. More than a decade into the social media revolution, the American public is waking up to the idea that the tech sector's intentions might not be as pure as advertised. The mountains of money being made off our browsing habits and purchase histories are used to fund ever-more extravagant and utopian projects that, by their very natures, will corrode the foundations of free society, leaving us all helpless and digitally enslaved to an elite crew of ultra-sophisticated tech geniuses. But it's not too late to turn the tide. There's still time for Gen X to write its own future. A spirited defense of free speech, eye contact, and the virtues of patience, *Zero Hour for Gen X* is a cultural history of the last 35 years, an analysis of the current social and historical moment, and a generational call to arms.

Saving Apollo Encounter Books

Born into misery in Syria, gruesomely injured in Iraq, clandestinely transferred to Lebanon, rejected by service members asking to adopt him in the US, Apollo never gives up. *SAVING APOLLO* is

a parable for all ages about a forsaken dog who always opens his heart and turns darkness into light as he searches for a permanent home and country. While one simple animal, Apollo's experiences symbolize something larger than himself. His story offers a powerful message of hope and an upbeat remedy for despair. As past chairperson of the Mayor's Animal Advisory Committee for the City of Philadelphia and president of the Board of Directors for the Pennsylvania Society for the Prevention of Cruelty to Animals, VALERIE OGDEN, actress/author, was asked to greet non-commissioned war dogs flying in from Beirut, Lebanon as they were reunited with their US service owners in Philadelphia. Apollo was one of the dogs. After this Brave Heart's American dream turned into one nightmare after another, he ended up living with her permanently. Website: www.saving-apollo.com. "Saving Apollo is a heart wrenching but uplifting story of war, courage, and hope. This gripping account of a dog's astounding adventures and survival spans continents and political chess games. Apollo, the canine hero, teaches us that persistence and the joy of life will see us through even the worst of catastrophes. The narrative highlights that incredible and very special bond between dogs and humans." -Edward G. Rendell, former Governor of Pennsylvania and former Mayor and District Attorney of Philadelphia. "Saving Apollo is a page turner about a maltreated dog that always finds the best in any situation. It is also a warm and joyful tale about humanity coming together to save a very deserving life. This is a lesson in compassion and healing, and an inspiration for the future generation of animal rescuers." - Meredith Ayan, Executive Director, The

Society for the Prevention of Cruelty to Animals International. "A moving experience about the courage and endurance of an animal with an unstoppable will to live. Having rescued my own dog from Syria, Saving Apollo brings such engaging detail to the strength of these animals and is tough to put down." -Daniel Rindone, U.S. Army Ranger. Deployed to Syria 2017. "Packed with its vivid characters and dramatic incidents, the book is a touching reminder that goodness can be found when you least expect it. I knew Apollo well at BETA and his spirited portrayal is deeply affecting." -Helena Hesayne, founder of Beirut for the Ethical Treatment of Animals (BETA). "A touching tale about my remarkably heroic patient, Apollo. I wept and laughed as I read his engrossing story as he deals with the best and worst of humanity through his infinite capacity to love and thrive. The book, just like the dog, is unforgettable." -Lauren Deahl, Doctor of Veterinary Medicine, Specializing in surgery at Veterinary Specialty & Emergency Center (VESEC). Volunteer with animal rescue efforts. *The Life and Campaigns of Lieut.-Gen. U. S. Grant, from His Boyhood to the Surrender of Lee* National Geographic Books

Big cities don't have to mean a dystopian future. They can be turned around to be powerhouses of well-being and environmental sustainability - if we empower women. This book is a unique collaboration between C40 and Friends of the Earth showcasing pioneering city mayors, key voices in the environmental and feminist movements, and academics. The essays collectively demonstrate both the need for women's empowerment for climate action and the powerful change it can bring. A rallying

call – for the planet, for women, for everyone.

Read Jeff Gordinier's posts on the Penguin Blog In this simultaneously hilarious and incisive "manifesto for a generation that's never had much use for manifestos," Gordinier suggests that for the first time since the "Smells Like Teen Spirit" breakthrough of the early 1990s, Gen X has what it takes to rescue American culture from a state of collapse. Over the past twenty years, the so-called "slackers" have irrevocably changed countless elements of our culture—from the way we watch movies to the way we make sense of a cracked political process to the way the whole world does business.

This book focuses squarely on the

problem of saving local government in the context of extraordinary financial challenges being faced across the globe. *Saving Local Government* is written principally for practitioners and employs a 'conversational' tone which makes complex theory both engaging and accessible. It augments world-best scholarship with Professor Joseph Drew's extensive practical experience in guiding local governments away from the brink of financial insolvency. It is thus a 'must read' for local government executives, Mayors, Councillors and the regulators that oversee the sector. In *Saving Local Government* Professor Drew also makes a number of important contributions to address significant gaps in the scholarly literature. In particular, the book includes extensive treatment of de-amalgamation, applied natural law philosophy, Aristotelian epistemology for evaluating public policy success, as well as alternatives to financial administration. The work is therefore also compelling reading for scholars.
