## COLBY JANIYA

*Comparative Administrative Law* Council of Europe

This text discusses in depth the youth unemployment problem and examines the various policy responses to it, including education and training, and active labour market policy. The book offers specific recommendations for this age group in industrialized, transition and developing countries.

*Marketing the E-business* Elsevier

This book presents an in-depth analysis of how statutory and third sector organisations have faced the challenge of dealing with former 'terrorists'. Offering a theoretically robust, empirically rich account of work with ex-prisoners and

those considered 'at risk' of involvement in extremism in the United Kingdom, Marsden dissects the problems governments are facing in dealing with the effects of 'radicalisation'. Increasingly, governments are struggling with the challenge of dealing with those who have become involved in extremism, and yet, comparatively little is known about how and why people renounce violence. Nor are existing efforts to 'deradicalise' extremists well understood. Arguing that reintegration is a more appropriate framework than 'deradicalisation', Marsden looks in detail at the mechanisms by which people can be supported to move away from extremism. By drawing out implications for policy, practice and academic debates around disengagement from radical subcultures, this book makes a significant contribution to an issue only likely to grow in importance for scholars of

criminological theory, terrorism and justice.

**A Girl in Exile** Psychology Press

An introductory book that provides theoretical, practical, and application coverage of the emerging field of type-2 fuzzy logic control. Until recently, little was known about type-2 fuzzy controllers due to the lack of basic calculation methods available for type-2 fuzzy sets and logic—and many different aspects of type-2 fuzzy control still needed to be investigated in order to advance this new and powerful technology. This self-contained reference covers everything readers need to know about the growing field. Written with an educational focus in mind, *Introduction to Type-2 Fuzzy Logic Control: Theory and Applications* uses a coherent structure and uniform mathematical notations to link chapters that are closely related, reflecting the

book's central themes: analysis and design of type-2 fuzzy control systems. The book includes worked examples, experiment and simulation results, and comprehensive reference materials. The book also offers downloadable computer programs from an associated website. Presented by world-class leaders in type-2 fuzzy logic control, *Introduction to Type-2 Fuzzy Logic Control*: Is useful for any technical person interested in learning type-2 fuzzy control theory and its applications. Offers experiment and simulation results via downloadable computer programs. Features type-2 fuzzy logic background chapters to make the book self-contained. Provides an extensive literature survey on both fuzzy logic and related type-2 fuzzy control. *Introduction to Type-2 Fuzzy Logic Control* is an easy-to-read reference book suitable for engineers, researchers, and graduate students who want to gain deep insight into type-2 fuzzy logic control.

**Ethics in Public Service for the New Millennium** A IIS Press

*Nanotechnology and Biosensors* shows how nanotechnology is used to create affordable, mass-produced, portable, small sized biosensors to directly monitor environmental pollutants. In addition, it provides information on their integration into components and systems for mass market applications in food analysis, environmental monitoring and health diagnostics. Nanotechnology has led to a dramatic improvement in the performance, sensitivity and selectivity of biosensors. As metal-oxide and carbon nanostructures, gold and magnetite nanoparticles, and the integration of dendrimers in biosensors using nanotechnology have contributed greatly in making biosensors more effective and affordable on a mass-market level, this book presents a timely resource on the topic. Highlights nanotechnology-based approaches to the detection of enzyme inhibitors, direct enzymatic and microbial detection of metabolites, and nutrients using biosensors. Includes examples on how nanotechnology has led to improvements in the construction of portable, selective and sensitive biosensing devices. Offers thorough coverage of biomarker/biosensor interaction for the rapid detection of toxicants and pollutants.

**Kerplunk!** Catapult

This volume presents the most complete collection available of the work of Victor Zarnowitz, a leader in the study of business cycles, growth, inflation, and forecasting. With characteristic insight, Zarnowitz examines theories of the business cycle, including Keynesian and

monetary theories and more recent rational expectation and real business cycle theories. He also measures trends and cycles in economic activity; evaluates the performance of leading indicators and their composite measures; surveys forecasting tools and performance of business and academic economists; discusses historical changes in the nature and sources of business cycles; and analyzes how successfully forecasting firms and economists predict such key economic variables as interest rates and inflation.

*Economics* World Bank Publications  
Presents a collection of curmudgeonly tales on Pacific Northwest country living as enjoyed by both outdoorsmen and armchair enthusiasts, in a volume that explores the lighter side of such topics as gun safes, fly tying, and bird dog flatulence.

**Employment Policy** Architectural Press

Abstract: Fafchamps, Hamine, and Zeufack test two alternative models of learning to export: productivity learning, whereby firms learn to reduce production costs, and market learning, whereby firms learn to design products that appeal to foreign consumers. Using panel and cross-section data on Moroccan manufacturers, the authors uncover evidence of market learning but little evidence of productivity learning. These findings are consistent with the concentration of Moroccan manufacturing exports in consumer items—the garment, textile, and leather sectors. It is the young firms that export. Most do so immediately after creation. The authors also find that, among exporters, new products are exported very rapidly after production has begun. The share of exported output nevertheless increases for 2-3 years after a new product is introduced. Old firms are unlikely to switch to exports, even in response to changes in macroeconomic incentives. The authors find a positive relationship between exports and productivity and conclude that it is the result of self-selection: it is the more productive firms that move into exports. Policy implications are discussed. This paper—a product of Macroeconomics and Growth, Development Research Group—is part of a larger effort in the group to investigate the microeconomic foundations of export and growth performance using plant-level data. The authors may be contacted at marcel.fafchamps@economics.ox.ac.uk or azeufack@worldbank.org.

**Business Cycles** Skyhorse Publishing Inc. "A major international novelist."—The New York Times

*Architectural Character & the History of Architecture* Springer

"Adds new information covering the use of computer technology and the web to conduct training, as well as coverage of contemporary training issues, such as changes in demographics, the influences of technology, and the increasing emphasis on international concerns." -- Cover.

*The General of the Dead Army* Wiley-Interscience

This text builds a solid foundation in organizational behavior concepts needed to understand individual and group behavior in organizations. The focus is on developing effective leadership behavior beginning with discovery of your own preferences in terms of your behavioral choices, your preferred behavior in groups, and your behavioral preference for certain organizational structures. A blend of current theory, practical applications, self-assessment exercises, and case studies help explain and apply concepts in an experiential manner. Book jacket.

**The Family Structure in Islam** Rowman & Littlefield

This book explains the theory and application of research techniques used in linear regression analysis. Dr. Seber gives a full discussion on the assumptions underlying regression models, and presents a variety of graphic and computational techniques for investigating these assumptions. His geometric approach enables the reader to deal with full rank and less than full rank models at the same time, and he varies the material by using the theory of generalized inverses to explain other approaches. Seber gives special attention to cases in straight-line and polynomial regression, analysis of variance and co-variance models associated with experimental designs in a theoretical framework. He also includes a number of topics which are usually omitted from most books, but are important in this area: optimal design, ridge estimators, two-phase regression, spline functions, and missing observations—with up-to-date sources of the literature available in these areas. Over 200 carefully selected problems, outline solutions, a reference bibliography, and appendices make this one of the most useful and informative books available on the subject of linear regression.

**Industrial Power Systems Handbook** Gower Publishing Company

An essential topic for the semiconductor fabrication and electronics manufacturing industry, also relevant to electronic design engineers in microelectronics and other industry sectors that use cleanrooms, for

example, pharmaceutical. This book offers an introduction to the role of cleanrooms, their use and specification, for a wide range of technicians and technical managers. products and it is for this reason that cleanrooms are becoming a regular feature of modern industry in its battle to control contamination. With the demand for higher productivity and reliability of the manufacturing process and the ever-increasing miniaturisation of equipment, cleanrooms have become integral to the success of the manufacturing process. This book will teach you how to create a cleanroom and also how to effectively operate, maintain and work within this controlled environment. This book will help you manage your cleanroom investment more efficiently, thereby increasing your productivity through greater product yields.

Human Behavior in Organizations Prentice Hall

"'Gender Matters' is a manual aimed to assist educators and youth leaders work on issues of gender and gender-based violence with young people. This publication presents theoretical information, methods and resources for education and training activities, along with concrete exercises that users can put into practice in their daily work. Violence is a serious issue which directly affects the lives of many young people. It often results in lasting damage to their well-being and integrity, putting even their lives at risk. Gender-based violence, including violence against women, remains a key human rights challenge in contemporary Europe and in the world. Working with young people on human rights education is one way of preventing gender-based violence from occurring. By raising awareness on why and how it manifests and exploring its impact on people and in society, gender-based violence will no longer go undetected. Gender really does matter, to women, to men, to young people - to all of us. This manual serves to explore these human rights issues and act upon them."--Book jacket.

### **Bibliografia kombëtare e Republikës Popullore Socialiste të Shqipërisë**

Walter de Gruyter

Two destinies intersect in this novel -- that of Gjorg, a young mountaineer who has just killed a man in order to avenge the death of his older brother, and who expects to be killed himself in keeping with the code of the highlands; and that of

a young couple who have come to study the age-old customs, including the blood feud.

*Paper Based Sensors* Simon and Schuster  
No matter who you identify with—Democrat or Republican, Tea Party or Green Party, Independent or something else altogether—we the people should read: The Constitution of the United States of America The Bill of Rights and all of the Amendments The Declaration of Independence The Articles of Confederation Take a moment or two to reflect on the words of our forefathers, as these are the documents that literally created America. The Constitution set up a system of government that remains centuries later. The eloquent words of The Declaration of Independence are an enduring statement of human rights. Written and signed by Benjamin Franklin, Thomas Jefferson, George Washington, and other great lights of our historical past, these documents define our freedoms and promise us our futures. And while they are often quoted, they are seldom actually read. Here is an opportunity to reach a new audience, with a fresh design and the same inspiring words. This collection will be a welcome addition to any American who believes in the dream.

The U.S. Constitution and Related Documents Wadsworth Publishing Company

This is a manual for teachers in Education for Democratic Citizenship (EDC) and Human Rights Education (HRE), EDC/HRE textbook editors and curriculum developers. Nine teaching units of approximately four lessons each focus on key concepts of EDC/HRE. The lesson plans give step-by-step instructions and include student handouts and background information for teachers. In this way, the manual is suited for trainees or beginners in the teaching profession and teachers who are receiving in-service teacher training in EDC/HRE. The complete manual provides a full school year's curriculum for lower secondary classes, but as each unit is also complete in itself, the manual allows great flexibility in use. The objective of EDC/HRE is the active citizen who is willing and able to participate in the democratic community. Therefore EDC/HRE strongly emphasize action and task-based learning.

### **Teaching Modern Southeast European History** New York : McGraw-Hill

*Paper Based Sensors*, Volume 89, the latest release in this comprehensive series that gathers the most important issues

relating to the design and application of these cost-effective devices used in many industries, including health and environment diagnostics, safety and security, chemistry, optics, electrochemistry, nanoscience and nanotechnologies, presents the latest updates in the field. Chapters in this new release include Exploring paper as a substrate for electrochemical micro-devices, Paper-based sensors for application in biological compound detection, Printed paper-based (bio)sensors: design, fabrication and applications, Paper-based electrochemical sensing devices, Multifarious aspects of electrochemical paper-based (bio)sensors, Paper Based Biosensors for Clinical and Biomedical Applications, and more. Provides updates on the latest design in paper-based sensors using various nano and micromaterials Includes optical/electrical-based detection modes integrated within paper-based platforms Covers applications of paper-based platforms in diagnostics and other industries

**Practical Cleanrooms** University of Chicago Press

This useful text unpicks the challenges of e-Marketing for many types of business. It uses topical case studies and accompanying web material to provide an up-to-date study of effective marketing strategies.

Eugénie Grandet Routledge

This introduction to microelectronic circuits and devices views a circuit as an entire electronic system, rather than as a collection of individual devices. Providing students with the tools necessary to make intelligent choices in the design of analogue and digital systems, it introduces the MOSFET, BJT, and JFET in a single chapter on device properties; covers the non-ideal properties of op-amps using an approach that can be understood by those with little prior knowledge of transistor theory; and contains an optional discussion of photonic devices - including the photodiode, phototransistor, light-emitting diode, and laser diode.
