Elements of Metallurgy and Engineering Alloys ASM International

Autofrettage Processes: Technology and Modeling deals with the technology and modeling of autofrettage processes, explaining the subject in a lucid manner. It highlights how the theory of plasticity and finite element modeling are applied in the modeling of autofrettage processes. Aimed at senior students of mechanical, production, automobile, and chemical engineering, it has the potential to directly benefit practicing engineers and industrials, owing to the inclusion of topics like thermal autofrettage. Key Features: Provides a general introduction to autofrettage Covers the application of theory of plasticity and finite element modeling of autofrettage processes Offers exposure to newer autofrettage processes that to date have not been implemented in industries, along with useful practical data

Code of Federal Regulations, Title 49, Transportation, Pt. 178-199, Revised As of October 1 2012 SAE International

Alloying: Understanding the Basics is a comprehensive guide to the influence of alloy additions on mechanical properties, physical properties, corrosion and chemical behavior, and processing and manufacturing characteristics. The coverage considers "alloying" to include any addition of an element or compound that interacts with a base metal to influence properties. Thus, the book addresses the beneficial effects of major alloy additions, inoculants, dopants, grain refiners, and other elements that have been deliberately added to improve

performance, as well the detrimental effects of minor elements or residual (tramp) elements included in charge materials or that result from improper melting or refining techniques. The content is presented in a concise, user-friendly format. Numerous figures and tables are provided. The coverage has been weighted to provided the most detailed information on the most industrially important materials.

Handbook of Comparative World Steel Standards IntraWEB, LLC and Claitor's Law Publishing

The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the United States Federal Government.

Proceedings of the 28th Annual Conference, Technical Advances in Steel Castings Government Printing Office

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.

Title 49 - Transportation: Department of Transportation Parts 100 - 185

Government Printing Office

This practical reference provides thorough and systematic coverage on both basic metallurgy and the practical engineering aspects of metallic material selection and application.

Materials for the Mining Industry

Government Printing Office

Contains over 4,800 metals and alloys designations. Metals and Alloys in the Unified Numbering System, 8th Edition (UNS) provides a means of correlating many nationally used metal and alloy numbering systems currently

administered by societies, trade associations, and those individual users and producers of metals and alloys.

Annual Book of ASTM Standards ASM International

More than 30,000 listings are presented in this edition with increased coverage from major steel producing countries such as China, India, and Japan.

National Annual Diesel-fuel Survey CRC Press

Issues for Dec. 1967- include the H. W. Gillet and Edgar Marburg lectures.
