Look for O'Brien's new book, *American Fantastica*, on sale October 24th A classic work of American literature that has not stopped changing minds and lives since it burst onto the literary scene, *The Things They Carried* is a ground-breaking meditation on war, memory, imagination, and the redemptive power of storytelling. *The Things They Carried* depicts the men of Alpha Company: Jimmy Cross, Henry Dobbins, Rat Kiley, Mitchell Sanders, Norman Bowker, Kiowa, and the character Tim O'Brien, who has survived his tour in Vietnam to become a father and writer at the age of forty-three. Taught everywhere—from high school classrooms to graduate seminars in creative writing—it has become required reading for any American and continues to challenge readers in their perceptions of fact and fiction, war and peace, courage and fear and longing. *The Things They Carried* won France's prestigious Prix du Meilleur Livre Etranger and the Chicago Tribune Heartland Prize; it was also a finalist for the Pulitzer Prize and the National Book Critics Circle Award.

*Fundamentals of Financial Accounting*, presents an engaging, balanced, and appropriately paced analysis of the fundamentals of financial accounting. Its conversational writing style makes it easy to read and understand, while the selection of real focus companies reinforces the relevance of accounting by introducing students to accounting and business activities in the context of their favorite companies. Balance between preparer and user orientations is achieved throughout the book, by studying both the accounting activities that take place inside the company, as well as evaluating their impact on decisions, and users outside the company. Topic coverage is paced appropriately for students new to accounting, and is thoroughly reinforced every step of the way with an ample variety of innovative pedagogical tools. Clearly understandable, relevant, and accessible, *Fundamentals of Financial Accounting* is simply the most student-friendly financial book on the market and provides the tools for students to grasp financial accounting from the ground up.

This book provides a highly illustrated guide to the design, installation and maintenance of hot and cold water supply systems for domestic buildings. Based on British Standard BS 6700, the new edition takes into account revisions to the standard since the book was first published in 1991. It has also been updated to give guidance on the 1999 Water Supply Regulations and includes revisions to the Building Regulations. Written for designers and installers, this immensely practical book will also be of interest to technical staff of water undertakers, property services managers and students of NVQ and BTEch courses. It was specially commissioned by the British Standards Institution and written for BSI by Bob Garrett, formerly of Langley College of Further Education and past President of the National Association of Plumbing Teachers.

Derek Parfit presents the third volume of *On What Matters*, his landmark work of moral philosophy. Parfit develops further his influential treatment of reasons, normativity, the meaning of moral discourse, and the status of morality. He engages with his critics, and shows the way to resolution of their differences. This volume is partly about what it is for things to matter, in the sense that we all

have reasons to care about these things. Much of the book discusses three of the main kinds of meta-ethical theory: Normative Naturalism, Quasi-Realist Expressivism, and Non-Metaphysical Non-Naturalism, which Derek Parfit now calls Non-Realist Cognitivism. This third theory claims that, if we use the word 'reality' in an ontologically weighty sense, irreducibly normative truths have no mysterious or incredible ontological implications. If instead we use 'reality' in a wide sense, according to which all truths are truths about reality, this theory claims that some non-empirically discoverable truths—such as logical, mathematical, modal, and some normative truths—raise no difficult ontological questions. Parfit discusses these theories partly by commenting on the views of some of the contributors to Peter Singer's collection *Does Anything Really Matter?* Parfit on Objectivity. Though Peter Railton is a Naturalist, he has widened his view by accepting some further claims, and he has suggested that this wider version of Naturalism could be combined with Non-Realist Cognitivism. Parfit argues that Railton is right, since these theories no longer deeply disagree. Though Allan Gibbard is a Quasi-Realist Expressivist, he has suggested that the best version of his view could be combined with Non-Realist Cognitivism. Parfit argues that Gibbard is right, since Gibbard and he now accept the other's main meta-ethical claim. It is rare for three such different philosophical theories to be able to be widened in ways that resolve their deepest disagreements. This happy convergence supports the view that these meta-ethical theories are true. Parfit also discusses the views of several other philosophers, and some other meta-ethical and normative questions.

This thorough and detailed exposition is the result of an intensive month-long course on mirror symmetry sponsored by the Clay Mathematics Institute. It develops mirror symmetry from both mathematical and physical perspectives with the aim of furthering interaction between the two fields. The material will be particularly useful for mathematicians and physicists who wish to advance their understanding across both disciplines. Mirror symmetry is a phenomenon arising in string theory in which two very different manifolds give rise to equivalent physics. Such a correspondence has significant mathematical consequences, the most familiar of which involves the enumeration of holomorphic curves inside complex manifolds by solving differential equations obtained from a "mirror" geometry. The inclusion of D-brane states in the equivalence has led to further conjectures involving calibrated submanifolds of the mirror pairs and new (conjectural) invariants of complex manifolds: the Gopakumar-Vafa invariants. This book gives a single, cohesive treatment of mirror symmetry. Parts 1 and 2 develop the necessary mathematical and physical background from "scratch". The treatment is focused, developing only the material most necessary

for the task. In Parts 3 and 4 the physical and mathematical proofs of mirror symmetry are given. From the physics side, this means demonstrating that two different physical theories give isomorphic physics. Each physical theory can be described geometrically, and thus mirror symmetry gives rise to a "pairing" of geometries. The proof involves applying  $\mathbb{R} \rightarrow \mathbb{C}$  circle duality to the phases of the fields in the gauged linear sigma model. The mathematics proof develops Gromov-Witten theory in the algebraic setting, beginning with the moduli spaces of curves and maps, and uses localization techniques to show that certain hypergeometric functions encode the Gromov-Witten invariants in genus zero, as is predicted by mirror symmetry. Part 5 is devoted to advanced topics. This one-of-a-kind book is suitable for graduate students and research mathematicians interested in mathematics and mathematical and theoretical physics.

This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

This book challenges, with several powerful arguments, some of our deepest beliefs about rationality, morality, and personal identity. The author claims that we have a false view of our own nature; that it is often rational to act against our own best interests; that most of us have moral views that are directly self-defeating; and that, when we consider future generations the conclusions will often be disturbing. He concludes that moral non-religious moral philosophy is a young subject, with a promising but unpredictable future.

The quality of financial sector supervision has emerged as a key issue from the financial crisis. While most countries operated broadly under the same regulatory standards, differences emerged in supervisory approaches. The international response to this crisis has focused on the need for more and better regulations (e.g., in areas such as bank capital, liquidity and provisioning) and on developing a framework to address systemic risks, but there has been less discussion of how supervision itself could be strengthened. The IMF's work in assessing compliance with financial sector standards over the past decade in member countries suggests that while progress is being made in putting regulation in place, work remains to be done in many countries to strengthen supervision. How can this enhanced supervision be achieved? Based on an examination of lessons from the crisis and the findings of these assessments of countries' compliance with financial standards, the paper identifies the following key elements of good supervision—that it is intrusive, skeptical, proactive, comprehensive, adaptive, and conclusive. To achieve these elements, the "ability" to supervise, which requires appropriate resources, authority, organization and constructive working relationships with other agencies must be complemented by the "will" to act. Supervisors must be willing and empowered to take timely and effective action, to intrude on decision-making, to question common wisdom, and to take unpopular decisions. Developing this "will to act" is a more difficult task and requires that supervisors have a clear and unambiguous mandate, operational independence coupled with accountability, skilled staff, and a relationship with industry that avoids "regulatory capture." These essential elements of good supervision need to be given as much attention as the regulatory reforms that are being contemplated at both national and international levels. Indeed, only if supervision is strengthened can we hope to effectively deliver on the challenging-but crucial-regulatory reform agenda. For this to happen, society must stand with

supervisors as they play their role as naysayers in times of exuberance.

The past decade has witnessed dramatic developments in the field of theoretical physics. This book is a comprehensive introduction to these recent developments. It contains a review of the Standard Model, covering non-perturbative topics, and a discussion of grand unified theories and magnetic monopoles. It introduces the basics of supersymmetry and its phenomenology, and includes dynamics, dynamical supersymmetry breaking, and electric-magnetic duality. The book then covers general relativity and the big bang theory, and the basic issues in inflationary cosmologies before discussing the spectra of known string theories and the features of their interactions. The book also includes brief introductions to technicolor, large extra dimensions, and the Randall-Sundrum theory of warped spaces. This will be of great interest to graduates and researchers in the fields of particle theory, string theory, astrophysics and cosmology. The book contains several problems, and password protected solutions will be available to lecturers at [www.cambridge.org/9780521858410](http://www.cambridge.org/9780521858410).

A text that makes the mathematical underpinnings of robot motion accessible and relates low-level details of implementation to high-level algorithmic concepts. Robot motion planning has become a major focus of robotics. Research findings can be applied not only to robotics but to planning routes on circuit boards, directing digital actors in computer graphics, robot-assisted surgery and medicine, and in novel areas such as drug design and protein folding. This text reflects the great advances that have taken place in the last ten years, including sensor-based planning, probabilistic planning, localization and mapping, and motion planning for dynamic and nonholonomic systems. Its presentation makes the mathematical underpinnings of robot motion accessible to students of computer science and engineering, relating low-level implementation details to high-level algorithmic concepts.

Australia has a very high level of compliance with the Basel Core Principles for Effective Banking Supervision (BCPs). The Australian banking system was more sheltered than a number of other countries and weathered the Global Financial Crisis relatively well. This was in part due to relative concentration of the system on a well performing domestic economy, but also due to a material contribution from a well-developed regulatory and supervisory structure. Notable strengths of the Australian supervisory approach rest in its strong risk analysis and on the focus of the responsibility of the Board. The Australian banking system however, is still vulnerable to continuing aftershocks of the financial crisis not least as banks' funding profiles could be a conduit of instability.

Research on gene drive systems is rapidly advancing. Many proposed applications of gene drive research aim to solve environmental and public health challenges, including the reduction of poverty and the burden of vector-borne diseases, such as malaria and dengue, which disproportionately impact low and middle income countries. However, due to their intrinsic qualities of rapid spread and irreversibility, gene drive systems raise many questions with respect to their safety relative to public and environmental health. Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back, questions about the ethics surrounding use of this research are complex and will require very careful exploration. Gene Drives on the Horizon outlines the state of knowledge relative to the science, ethics, public engagement, and risk assessment as they pertain to research directions of gene drive systems and governance of the research process. This report offers principles for responsible practices of gene drive research and related applications for use by investigators, their institutions, the research funders, and regulators.

Incomplete Category Fronting is a detailed investigation of the syntax of incomplete category fronting in German, carried out from a cross-linguistic perspective. The study presents a wealth of empirical evidence involving unbound traces created by remnant topicalization, wh-movement, scrambling, left dislocation, and extraposition. Four characteristic properties of remnant movement are identified that pose severe problems for a representational movement theory. It is argued that these properties can be fruitfully addressed on the basis of Chomsky's minimalist program, and that they follow from a derivational movement theory that incorporates the Barriers Condition, the Strict Cycle Condition, Fewest Steps, Last Resort, and the Minimal Link Condition but completely dispenses with surface filters. Incomplete Category Fronting provides an empirical underpinning for the minimalist program and presents a powerful argument for a derivational theory of grammar. Audience: Incomplete Category Fronting will interest all linguists working on theoretical syntax, Germanic syntax or the syntax-semantics interface.
