Pocket Neurology Lippincott Williams & Wilkins

This popular guide to the examination and interpretation of chest radiographs is an invaluable aid for medical students, junior doctors, nurses, physiotherapists and radiographers. Translated into over a dozen languages, this book has been widely praised for making interpretation of the chest X-ray as simple as possible. The chest X-ray is often central to the diagnosis and management of a patient. As a result every doctor requires a thorough understanding of the common radiological problems. This pocketbook describes the range of conditions likely to be encountered on the wards and guides the reader through the diagnostic process based on the appearance of the abnormality shown. Covers the full range of common radiological problems. Includes valuable advice on how to examine an X-ray. Assists the doctor in determining the nature of the abnormality. Points the clinician towards a possible differential diagnosis. A larger page size allows for larger and clearer illustrations. A new chapter on the sick patient covers the patient on ITU and the appearance of lines and tubes. There is extended use of CT imaging with advice on choosing modalities depending on the clinical circumstances. A new section of chest x-ray problems incorporates particularly challenging case histories. The international relevance of the text has been expanded with additional text and images.

Neuropsychiatric Assessment Springer Nature

Visually rich Netter artwork and detailed yet concise text provide you with an overview of general neurology and its intersection with internal medicine, neurosurgery, ophthalmology, psychiatry, and orthopedics.

Neurology E-Book John Wiley & Sons

The neuro rehab text that mirrors how you learn and how you practice! Take an evidence-based approach to the neurorehabilitation of adult and pediatric patients across the lifespan that reflects the APTA's patient management model and the WHO's International Classification of Function (ICF). You'll

study examination and interventions from the body structure/function impairments and functional activity limitations commonly encountered in patients with neurologic disorders. Then, understanding the disablement process, you'll be able to organize the clinical data that leads to therapeutic interventions for specific underlying impairments and functional activity limitations that can then be applied as appropriate anytime they are detected, regardless of the medical diagnosis.

Value for money is not being achieved across all trusts in the planning, procurement and use of 'high value equipment', such as CT, MRI scanners and Linear Accelerator Machines (linacs). Trusts are not collaborating to purchase machines and they are not getting the best prices. Around half of all CT and MRI scanners and linac machines are due for replacement within three years. Were trusts to replace existing machines, they would collectively need to find £460 million within three years. The number of diagnostic scans carried out CT and MRI machines has increased almost threefold and radiotherapy treatment sessions have increased two and a half fold over the last ten years. Many trusts

face resource constraints in meeting increasing demand, with vacancy rates for consultant radiologists of around seven per cent and high rates of attrition for people training to become therapeutic radiographers delivering radiotherapy treatment. There is wide variation in utilisation rates of MRI and CT scanning machines. However, because there is no central collection of data, individual trusts cannot compare their utilisation rates and costs with other trusts in order to improve efficiency. Trusts report their average costs per scan, but they do so differently. In 2008-09, the average cost per CT scan ranged from £54 to £268; and, for MRI, it was between £84 and £472 per scan. However, for radiotherapy, the Department of Health has developed a dataset which will enable comparisons to be made about efficiency and utilisation between radiotherapy treatment centres.

Bedside Neurological examination is an important tool in diagnosing neurological disorders. Despite significant advances in the investigations available for diagnosing neurological disorders bedside neurological examination remains the cornerstone in diagnosing neurological disorders and should not only be conducted prior to the investigations but should be actually be utilized to plan the appropriate investigations. The book provides a focused account of various aspects of the neurological examination leading to clinical localisation and hence obtaining the neurological diagnosis. It includes topics like 'how to obtain a appropriate neurological history', 'higher mental system examination', examination of speech and various cranial nerves and examination of other systems including motor system, sensory system, reflexes, cerebellar and autonomic nervous system. The book also includes certain interesting topics like 'neurological examination of the unconscious patient' and 'tricks and tips of neurological localisation. The book is easy to read and memorize due to multiple self explanatory illustrations and important aspects being highlighted in bulleted format. The book will be of extreme help for MD and DNB students of Internal Medicine as well as DM and DNB students of Neurology and DNB and MCH Neurosurgery students, hence covering a fairly large readership base. It will also be read by practising Internal medicine physicians, neurologists and neurosurgeons who may want to revise the basics and tricks of neurological examination and localization

DeMyer's the Neurologic Examination Elsevier Health Sciences Essential Surgery is a comprehensive and highly illustrated textbook for clinical students as well as a practical manual for junior doctors and those preparing for postgraduate qualifications in surgery. The unique feature of the book is its problem-orientated nature as distinct to the traditional disease-based structure. Explains the pathophysiological basis of surgical diseases and of their management to help bridge the gap between the basic medical sciences and clinical problems. Adopts a problem-solving rather than a disease-orientated approach to diagnosis and treatment, reflecting current teaching trends which emphasise the full understanding of how a diagnosis is made and why a particular treatment is used. Includes information about epidemiology, disease prevention and the provision of health care, and tries to relate the community aspects of surgical problems to aetiology, disease prevention and primary care. Contains outlines of common surgical operations, to enable students and junior doctors to explain operations to patients and to allow them to participate intelligently in the operating department, as well as giving them an understanding of how to prevent complications. Includes a major section on accident surgery related to the general surgeon. Now with full text online on Student Consult. Comprehensively updated in line with the evolution and refinement of surgery over the past few years, by an expanded author team and an advisory group of surgical and radiological experts. All line drawings re-presented for greater impact and clarity. All radiological images reviewed and updated. Includes a new chapter on screening. Incorporates all the latest consensus guidelines for managing common disorders. Neurologic Examination Lippincott Williams & Wilkins Over 200 color figures and concise, readable text guide students through the steps to perform a thorough and effective clinical examination and perform basic practical skills.
